

the 1990s, the number of people in the world who are under 15 years of age has increased by 1.2 billion, from 1.1 billion in 1980 to 2.3 billion in 1999. The number of people aged 15 years and over has increased by 1.1 billion, from 1.1 billion in 1980 to 2.2 billion in 1999.

There are a number of reasons why the world population is increasing so rapidly. One of the main reasons is that the number of people who are surviving to old age is increasing. This is due to a number of factors, including improved medical care, better nutrition, and a decline in the death rate.

Another reason why the world population is increasing so rapidly is that the number of people who are having children is increasing. This is due to a number of factors, including a decline in the age at which people are having children, and a decline in the number of children who are dying in infancy.

There are a number of other factors that are contributing to the rapid increase in the world population. These include a decline in the death rate, and a decline in the number of people who are having children.

The rapid increase in the world population is a cause for concern. It is likely to lead to a number of problems, including a shortage of food, a shortage of water, and a shortage of housing.

It is important that we take action to address these problems. One of the most important things we can do is to reduce the birth rate. This can be done by providing better education for women, and by providing better health care for women and children.

Another important thing we can do is to improve the standard of living for people in the developing world. This can be done by providing better education, and by providing better health care.

It is important that we take action to address these problems now. If we do not, the world population will continue to increase rapidly, and the problems will become even more serious.
